DETAILED ACTION

1. This communication is responsive to your remarks filed 9/27/04. Claims 1-22 are currently pending in this application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Henderson.

Henderson discloses a flexible modular coil system for Magnetic Resonance Imaging. Applicant's attention is directed to the abstract of the disclosure and the description of Fig. 9A. to 9C. Each circuit or coil module includes a conductive trace 36 mounted on a substrate 40. The substrate may be of plastic in any of the forms contemplated in lines 42-58 of col. 4. Note that the circuit or module includes an electrical component 24 which may be an amplifier as mentioned in the abstract of the disclosure. The circuits may take on any of the shapes known in the art as depicted in Fig. 12A 12B, 13A and 13C. In addition, coil modules are combined by using the alignment mechanisms shown as e.g. 66, 68 and 72 (Fig. 9A-C). Henderson contemplates his circuits or coils for use in an array, such arrays are understood in the art to contain a plurality of coils where the S/N ratio is a function of the number of elements of the array.

Response to Arguments

4. Applicant's arguments filed 9/27/04 have been fully considered but they are not persuasive. The examiner agrees with applicant's technical characterization of the prior art. However, the examiner cannot agree that the claims at issue distinguish from the prior art. Applicant's arguments with this respect, suggest that coils are different from circuits and that attaching circuits somehow mean that the circuits are electrically connected. All such limitations are simply not present in the claims at issue. Applicant also points out that Henderson is concerned with the FOV, while the claimed invention is for parallel processing. Again this parallel processing, is not mentioned either explicitly or implicitly by the claims at issue. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
